

The MAHLE logo is positioned in the top right corner of the advertisement. It consists of the word "MAHLE" in a bold, blue, sans-serif font. The background of the entire advertisement is a close-up photograph of several intake manifold gaskets. Some gaskets have a dark grey or black metal carrier with a green rubber seal, while others are made of a lighter-colored material, possibly nylon, with a black rubber seal. The gaskets are arranged in a slightly overlapping, diagonal pattern across the frame.

APPLICATION ENGINEERED GOES TO ANOTHER LEVEL

MAHLE® gaskets pioneered the best option for sealing the failing OE intake manifold gaskets in many applications. Advancements like using quality HNBR rubber (or FKM), combined with metal load limiters and RTV diversion channels in a polyamide nylon carrier guarantee the optimum seal for these applications. Now, in an effort to provide discerning technicians with options, MAHLE Aftermarket has added new part numbers containing lower intake manifold gaskets with a metal carrier to provide the same great seal.
